(*) For heat pump space heaters and heat pump combination heaters, the rated heat output Prated is equal to the design load for heatig Pdesignh, and the rated heat output of a supplementary heater Psup is equal to the supplementary capacity for heatng sup(Tj).

(**) If Cdh is not determined by measurement then the default degradation coefficient is Cdh = 0,9.

(***) If the declared TOL is lower than the T designh of the considered climate then the outdoor dry bulb temperature Tj is equal to T designh.

This information is based on EU regulation No 811/2013 and No 813/2013.
